

SAFETY FIRST, QUALITY FIRST

Wear the automatic inflatable motorcycle anti-collision safety clothing on the body and fix the connecting buckle on the motorcycle. After the accidental situation is found, the driver and the motorcycle are disengaged, and after the connecting rope pulls the automatic inflating device of the inflatable anti-collision safety suit, the unhooking device of the connecting rope is also released at the same time. At this time, the automatic inflator of the anti-collision safety suit quickly fills the airbag with air. Protect the vital parts of the anti-collision safety clothing when the driver is on the ground to ensure life safety. The airbag will protect important parts of the body.
